

**Date:**

September 2019

**Description:**

Universal Compressor Bracket

**Application:**

Multi Vehicle Use

**Part No. & Barcode:**

3501010 - 9332018067234

**Product Group:**

083 – Air Locker Accessories

**Availability Date:**

September 2019

**Fitting:**

Dependent on vehicle application and fitment location

## Where do I mount my ARB Compressor?

Mounting a compressor in modern day vehicles has become more and more of a challenge as engine bays in modern vehicles have limited room for the installation of aftermarket accessories.

To combat this, ARB has introduced a high quality, engineered bracket system to integrate your ARB compressor into your vehicle.

The Universal Compressor Bracket allows you to install a CKMTA (twin), CKMA (single) or CKSA (locker only) compressor with optional Air Locker Solenoids, Quick Connect Coupling, Switch, Manifold kit (CKMTA only) and ARB LINX PRV (pressure regulator valve) to the bracket and then the bracket can be fitted to a vehicle in a suitable location. An additional Universal bracket will also allow the fitment of the 4L ARB Air Tank.

This bracket is a perfect solution for in tray use for 4x4 and 4x2 utilities, under seat locations and even the back of SUV's where space permits.

## Fitting:

The Universal Compressor bracket includes a comprehensive Installation guide showing detailed instructions on fitting the CKMTA (twin) with various accessories including the ARB LINX PRV, compressor switch, quick connect coupling and manifold kit. The instructions also include other configurations of Air Tank fitment and CKMA (single) compressor.

The instructions also demonstrate how the bracket goes together and some possible mounting options into vehicles.

Fitting times will vary depending on vehicle type and location in vehicle.
